

3.3 LED light turn to flash quickly at the first slide (is equal to the first bark), reaching flashing once every second , it also flashes quickly at the second slide , and the collar will vibrate for about 2 seconds. Between the two slides, 3 to 5 seconds is the safe period. The vibration will last longer if it is caused by continual bark.

3.4 The vibration will last for about 5 seconds if it is caused by the sixth bark , after vibrating, the vibration set will stop for about 2 or 3 minutes safely and then it will recover to the initial condition

3.5 In the case of the allowable bark level is increased (clockwise), the slide friction must be strong enough to cause the vibration. Please don't use the friction overly while testing to prevent the product being damaged

3.6 Sliding on the soft surface won't cause the vibration .

3.7 When the collar is hung to the human' neck (the part which we touch with our hands and feel vibration while speaking) , if he shouts loudly , it also vibrates.

4 Adjust the vibration no-bark set

4.1 Open the oblong battery cover(1)(2)

4.2 Please distinguish the gaps beside the cell bucket. The right side is the vibration adjustment(9), and the other side is the allowable bark adjustment.

4.3 Adjust the vibration adjustment on the right clockwise, then the vibration will get lower, whereas, it will be stronger.

4.4 Adjust the allowable bark adjustment on the left clockwise, then the allowable bark will get lower, whereas, it will be greater.

4.5 Attention: you must adjust the adjustment with the special tool in the range of 180 degree, or the adjustment will be destroyed.

5 Fix the nylon collar

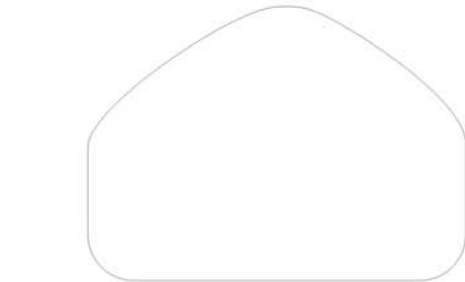

5.1 Our product matches a stretchy nylon collar which measures 20MM in width.

5.2 You also can choose 16MM wide meshbelt which is suitable to the small pets.

IMPORTANT ADVICE

1. Read the complete manual and follow all directions. If you have any questions, please call the franchisers.

2. This device is intended for use only on dogs. Never attempt to use it for any purpose

not described in this manual. 3. Never perform set-up procedures while the collar is on your dog.

4. Any collar worn for extended periods can cause a condition similar to bedsores, known as Pressure Necrosis. To reduce the possibility, you must do the following:

- Supervise your dog during the first 2 days of training
- Check the fit to prevent excessive pressure: you should be able to insert one finger between the collar strap and your dog's skin.
- Never leave the collar on the dog for more than 12 consecutive hours.
- Examine the dog's neck daily for any signs of a rash or a sore.
- Wash the dog's neck area and the probes of the collar weekly with a wash cloth and mild hand soap; rinse thoroughly.
- If the condition persists beyond 24 hours, see your veterinarian.

5. Do not attempt to dismantle or repair any components of this system; doing so will void the warranty in full. The computerized circuitry should be serviced only by an authorized expert.

6. Realize that because dogs have unique temperaments, there is no way of knowing how your dog will react to the introduction of a No-bark collar system. For the safety of your dog, a long lead should be used during initial training so you have control of the situation.

7. If you have reason to believe that your dog may pose a danger to others, harm itself, or react adversely to the collar, do not rely solely on this product to train your dog. If your dog shows signs of growling, snarling or biting while using the collar, stop immediately. Aggression in dogs has many causes. We recommend that you consult a knowledgeable professional dog trainer or animal behaviorist who has experience with aggressive dogs if your dog has shown any of these characteristics.

8. Occasionally, a dog cannot be trained to respond to a No-bark collar. Sometimes even a properly trained dog may disobey a command. Therefore, Invisible Technologies, its distributors, and dealers cannot guarantee that the system will in all cases keep the customer's animal from disobeying commands.

1 How to install the batteries :
1.1 Open the oblong cover (1)(2)
1.2 Put the collar in the flank side, and cathode of the cell bucket is above (2)
1.3 Put the three AG13/LR44 batteries into the cell bucket parallelly keeping the anode of the batteries upward (5)
1.4 Observe the LED indicative light, it will flash once every 5 seconds or just once every second in the case of the exploration pole is above (6)
2 Take down the batteries
2.1 Open the oblong cover (1)(2)
2.2 Pull the meshbelt, then the batteries will go out.
3 Test the vibration set
3.1 Please adjust the vibration to the highest frequency level (counterclockwise), which is convenient to test the vibration phenomenon.
Please notice that the adjustment has only half of the circle (180 dimension). Don't revolve it overly, or it will be damaged
3.2 Make the exploration pole slide along the firm and non-glassed surface lightly. While sliding, it will make a vibration which resembles the vibration of the sound track, and the LED light will flash (6)

Preparation before using

Features:

1. The newest intelligent transmission system is capable to identify the sound of the dogs. Besides, the "stop" function won't work if the sound isn't from the right dog. In that case, we can avoid making mistakes.

2. The set won't vibrate at the first bark, but if the bark lasts, the vibration time will lengthen gradually from the second bark to the sixth bark. And if the bark still continues at the highest frequency vibration the set will stop automatically for about 2 or 3 minutes and then get right.

3. The vibration remind is safe and effective. It is a fatherly collar without electric shock.

4. The allowable bark level is adjustable. The master can decide the bark level according to their need.

5. The vibration level can be adjusted, the masters can adjust the level according to the personalities of their pets.

6. The small battery is easy to change. And the battery can support the vibration more than 100 times.

7. The nylon collar is easy to adjust and comfortable to wear.

8. The waterproof collar is small and light.

The system includes:

1. a waterproof vibration set (1 pcs)
2. a nylon collar which is easy to adjust and wear (1 set)
3. six small batteries which are easy to buy: AG13 / LR44 (3+3 pcs)
4. a special screwdriver used to adjust the level of the allowable bark and vibration (1 pcs)
