

# **“Pets manager” Digital Invisible Fence**

## **(Indoor Version)**

**JBZL-03**

In order to let people set the forbidden areas for pets when they leave, we developed “pets manager” digital invisible fence. The technical content of the product is of the international advanced level, the digital invisible fence is composed of transmitter, receiver, and CPU central system mode intelligent controller. According to sizes of spaces, it can be adjusted freely by people, when pets wear the receiver, as soon as they are near to the wireless broadcast frequency signals areas, the receiver will receive the signals and start alarm or alert automatically, with harmless electronic stimulation in a same time, to alarm the pets not to enter the forbidden areas. The digital invisible fence can make pets have the habits of living in their independent spaces, prevent pets’ depressing behaviors, and keep your furnitures and living articles clean and tidy, then you will not need to worry about anything when you go outside.

**Description of product functions:**

- 1. “Pets manager” is designed to provide personal opportunity for pets training, and is used to prevent pets’ depressing behaviors —— no need to send the pets to the training centers.**
- 2. The product does not need cables, so you can place the “Pets manager” beside of the objects you want to keep away from pets.**
